Minimum 82% Efficiency

ASME Code Brass Headers

ASME Code Copper or Cupro-Nickel-Fin Tube

50 lb. Pressure Relief Valve

Small Footprint

Indoor/Outdoor

Heat Exchanger
- ASME HLW stamped; 100 PSIG MAWP
- National Board Listed
- Brass headers
- Finned tubing
  - Copper (standard)
  - Cupro-Nickel (optional)
- ASME Steel tube sheet
- Silicone O-Rings
- Fixed high limit, manual reset 160°F
- Fixed high limit, auto reset 135°F
- 50 PSIG Pressure Relief Valve
- Flow configuration (two-pass)

Controls
- RS-485 for Pentair Automation
- Firemans Switch
- Multiple Heater Connections
- Single mechanical temperature control
- Runtime (Hours heater is active)
- Cycles (Heater On/Off cycles)
- Stack Flue Sensor Temperature
- Flame Sensor status
- Digital display with diagnostics
- 126 Error Messages on LCD

- Input Power
  - 115/240V, 60Hz, 1 Ph Power supply
  - 115/240/24V Transformer

- Safety Interlocks
  - Electronic, Intermittent Ignition
  - High Gas Shut (HLS)
  - Auto Gas Shut-Off (AGS)
  - Stack Flue Sensor shut down (SFS)
  - Water pressure switch (PS)

Gas Control Train
- Fuel
  - Natural gas
  - Propane (minimum grade HD-5)
- Combination control valve
- On/off firing
- ANSI Z223.1/NFPA 54
- and/or CSA B149.1 Design certified

Construction
- Front controls (Index positioning)
- Stainless steel burners
- Polymer enclosure (Polyurethane Resin)
- Rodent resistant enclosure
- Gas line and PR Valve Escutcheons
- Indoor/outdoor installation
- Can be installed on combustible surface
- Listed for installation on combustible surfaces.

Venting
- Category I (Vertical only)
- Category III (Vertical or Horizontal)
- Indoor Heater Installation
  - Direct Air Intake Duct with 3-inch PVC Pipe
  - Vertical Negative Pressure (positive draft) - Type B vent pipe
  - Clearances from combustible surfaces: 6 in (15 cm) for top and for all sides

- Outdoor Heater Installation
  - Built-In Stackless Venting System
  - Exhaust Grill Vent

Other options
- Bolt Down Bracket Kit, P/N 460738
Air Supply Requirements Guide

Minimum Net Free Open Area for Each Opening* (Square Inches/Centimeters)

Combustion Air Supply

For indoor installation, the heater location must provide sufficient air supply for proper combustion and ventilation of the surrounding area. The minimum requirements for the air supply specify that the room in which a heater is installed should be provided with two permanent air supply openings; one within 12 inches (30 cm) of the ceiling, the other within 12 inches (30 cm) of the floor for combustion air, in accordance with the latest edition of ANSI Z223.1, or the National Fuel Gas code, the CSA B149.1, Natural Gas and Propane Installation Codes, as applicable, and any local codes that may apply. These openings shall directly, or through duct, connect to outdoor air.

Note: For indoor installations where combustion air might be insufficient, see "Air Supply Requirements Guide".
