PENTEK® TRI-LARM™
with **Link2O**

DETECTS LEAKS,
FREEZE, and
POWER LOSS

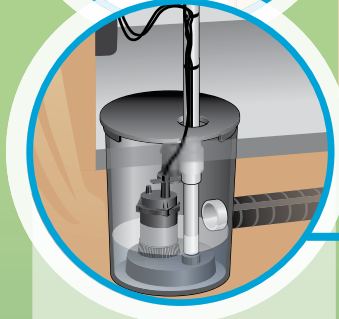

Pentek® Tri-Larm™ with Link₂O™

No matter where you are, remote monitoring keeps you informed about...

The Tri-Larm will detect a drop in temperature and notify you of the possibility of frozen pipes.

Power Loss

Tri-Larm alerts you if your power goes out. You'll know:

- When your sump pump is not running
- How long other appliances have been without power

Freeze Detector

Place the Tri-Larm in your basement, next to your washing machine, under the sink or anywhere a leak could occur. Combine the audible alarm with text and email alerts and the Tri-Larm will keep you informed of potential problems whether you are home or away.

Detects Leaks

The palm-sized Pentek Tri-Larm is powered by three AA batteries and will alert you when they need to be replaced.

Link₂O

Combine the Tri-Larm and the Battery Backup System for added control. When a leak is detected, the Tri-Larm can use Link₂O technology* to signal the BBU to turn on and limit damage.

*Active internet connection required
