Cristal-Flo™ II
Aboveground Sand Filter System
by Sta-Rite

Add sparkle to your aboveground pool and spend less time maintaining it. Sand media is a long-established method of pool water filtration and Sta-Rite raised the bar with its Cristal-Flo II aboveground sand filter system.

- Great performance and efficiency. The filter tank requires minimum maintenance. A simple turn of the multi-port valve lever accomplishes routine backwashing.
- The tank’s sophisticated design, internal components and even hydraulics have been engineered to maximize filter performance and extend time between cleanings.
- Unionized pump to filter connection allows for easy installation and servicing.
- Combination water and sand drain makes servicing and winterizing fast and easy.
- The Dynamo® Aboveground Pump features precision-manufactured components, rugged construction and a continuous duty, smooth running motor for years of quiet, dependable service.

Maximum capacity, minimum maintenance and cost
The low cost, easy-to-maintain filter system

Cristal-Flo™ II aboveground sand filter systems offer a variety of pump and filter combinations that allow you to precision-match your system to almost any pool requirement. Everything is easily assembled on an attractive, robust platform. And nothing could be easier to operate or maintain—a simple twist of the wrist puts the Cristal-Flo II filter system in backwash mode for quiet, efficient cleaning action.

Economical

The sand filtration media is permanent—no need to replace cartridge-style elements.

Built to last

The Cristal-Flo II filter tank and internal components are constructed of heavy-duty polyethylene, and the pump is made of Sta-Rite’s Dura-Glas™ Composite Resin. This system won’t corrode and resists the elements for years of service.
