One cleaning for an entire season?

System3 Mod Media filters from Sta-Rite handle 2–3 times more dirt than other filters to deliver maintenance-free performance for up to a full season. Featuring perfectly balanced flow and an integral manifold design, these filters are engineered to deliver the ultimate in labor savings. System3 Mod Media filters are ideal for inground pools, inground hot tubs and water features.

- Balanced-flow tank hydraulics direct water through each side of the filter module for uniform dirt loading, no cloggin and long, unattended operation.
- Complete media coverage combined with shallow pleats for greater dirt-holding capacities, longer filter cycles and less cleaning.
- Shallow pleat design also permits quick and thorough cleaning—just rinse the module with a hose.*

* Modules used in conjunction with certain pool/spa sanitizers may require soaking in special cleaning solutions.
Performing to a higher standard

Based on extensive research in filtration and media science by Sta-Rite®, System3 Mod Media filters make Ultra-Capacity Filtration™ a reality. Unlike conventional “cartridges,” these filters combine a balanced-flow and integral manifold design, plus an easily cleaned media element. Modular filter tanks permit quick change of filter media. The result is a filter system that not only requires less frequent cleaning but is also easy to clean.

The System3 Mod Media filter is constructed of Dura-Glas® high-density composite resin to weather the elements for long, dependable life. And its sleek, contemporary appearance and matte black finish look attractive in any pool setting.

Dirt-Loading Comparison
Handles 2–3 times more dirt than other media-type filters—up to an entire season without cleaning!

Ultra-Capacity Filtration
Balanced-flow tank design assures debris is evenly collected by the media—no clogging or long runs between cleanings.
