IMPORTANT SAFETY INSTRUCTIONS

READ AND FOLLOW ALL INSTRUCTIONS.

• Read this manual completely before attempting installation.
• Risk of Electric Shock. Install the ozone unit and any metallic plumbing associated with the unit at least 5 ft from the inside wall of tub or pool.
• Risk of Electric Shock. Connect this ozone generator in accordance with the installation instructions.
  Do not install within an enclosure that would restrict ventilation.
• (Applicable to cord/plug connected units only) Risk of electric shock. Connect only to a properly grounded, grounding type receptacle.
• Do not bury cord.
• Warning – To reduce the risk of electric shock, replace damaged cord immediately.
• Follow all applicable electrical codes.
• Electric shock hazard. Be sure to turn power OFF at power source before any service work is performed. Failure to do so could result in serious injury or death.
• Warning – Short term inhalation of high concentrations of ozone and long term inhalation of low concentrations of ozone can cause serious harmful physiological effects. DO NOT inhale ozone gas produced by this device.
• For your safety, do not store or use gasoline, chemicals or other flammable liquids or vapors near this or any other appliance.
• ![DANGER] A spontaneous and violent ignition may occur if oil, grease or greasy substances come in contact with oxygen under pressure. These substances must be kept away from oxygen regulators, cylinder valves tubing and connections, and all other oxygen equipment.

SAVE THESE INSTRUCTIONS!
SECTION 1 General Information

Description
The IntelliZone™ Commercial Ozone Generator (Models CD-2G, CD-5G and CD-7G) described in this manual is designed to provide the benefits of ozonated water in an environmentally safe and effective manner. The high quality, specially engineered components ensure efficient ozone output and reliable performance.

This ozone generator is safe and harmless to your equipment if installed properly.

Specifications
For detailed specifications refer to the ozone generator specification label located on the inside of the door on the unit.

Power Requirements:
Domestic: 120 VAC 60Hz
Export: 230 VAC 50Hz
Overcurrent Protection: 10 A

Shipping Weight:
P/N 521655: Approx. 50 lbs. (23 kg)
P/N 521656: Approx. 52 lbs. (24 kg)
P/N 521658: Approx. 61 lbs. (27.5 kg)

Location Requirements*:
Mounting: Wall mount in a clean, protected area. Floor mounting kit optional.
Ambient Temp.: 40°F - 100°F (5°C - 38°C)
Ventilation: Room should provide 6 air changes per hour minimum.
Clearance: Provide a minimum of 4" (10 cm) (clearance around unit).

* Protection from weather elements must be provided for outdoor installations. Operating outside of the recommended temp. ranges may result in damage not covered under the manufacturer’s warranty.

SECTION 2 Installation

Location
The ozone generator is designed for wall mounting. See Figure 1. Mount generator in a clean, protected area, either indoors or outdoors. (See LOCATION REQUIREMENTS Section 1) They can also be mounted to the floor or deck with optional feet. Locate generator out of reach of sprinklers or drainage spouts. Allow sufficient access for maintenance and all tubing and electrical wires. The generator must not be placed in locations where ambient ozone levels exceed 0.01 PPM.

Mounting
Wall Mount Option
1. Attach the Wall Mounting Brackets to the base and top of the enclosure using four 1/4" x 1" long bolts and washers provided.
2. Refer to Figure 1. Mark the locations for the four mounting bolts and install anchors appropriate for the mounting surface.
3. Install the four mounting bolts through the Wall Mounting Brackets and into the anchors.

Floor Mount (optional)

Figure 1: Wall Mount
The enclosure can be floor mounted to a solid, flat surface using the optional Floor Mounting Kit Part Number 521807.

**Electrical**
Refer to the unit's specification label and local electrical codes for information on proper electrical connection.

**External Control**
Make sure that the control switch is properly rated for the ozone generator. A pair of control contacts is provided inside the ozone generator. Refer to wiring diagram and **Figure 4** for proper connection.

**Plumbing**
Ozone gas is introduced to the circulation line using a venturi injector. Suction developed by the venturi allows the CD generator to operate safely under vacuum.

**Injector Assembly**
Plumb the Injector and/or Degas Assembly into the water line according to the installation instructions for that assembly. The Injector/Degas Assembly must be installed in the main return line after all other pool equipment.

**Water Check Valve** (optional item)
If the pool equipment is mounted above the water line, a 1/3# DELCheck check valve (P/N: 521806) must be installed between the pump outlet and the injector assembly.

**Ozone Gas Line**
1. Install the ozone check valve (contained parts bag) into the ozone output fitting on the generator. Apply plumbers tape or equivalent, to threads. Flow direction is away from the generator. Install elbow or straight MPT-to-compression fitting (contained in parts bag) onto check valve. Insert one end of ozone tubing into the fitting, hold the tubing in place and tighten the fitting.

   **NOTE:** Use a back-up wrench when tightening all fittings.

2. The injector assembly is also equipped with a compression fitting. Connect the other end of ozone tubing to the injector suction port as described in Step 1. **See Figure 2a.**

   **NOTE:** The ozone gas supply line must have a back flow prevention device (such as a check valve) installed between the ozone generator cabinet and the point of injection to prevent water from backing up into the generator system. An ozone supply check valve is included.
SECTION 3 Operation

Initial System Start-Up

Upon completing all of the generator system connections, you are ready to begin start-up procedures.

1. Check electrical fittings.
2. Check for proper voltage.
3. Turn on circulation pump.
4. Check for leaks.
5. With the ozone isolation valve closed, adjust injector bypass valve and/or filtration sidestream valve to flow water through the injector.
6. Open ozone isolation valve.
7. Turn ozone generator on.

NOTE: If your Injector Assembly is equipped with a ball valve, close the valve by turning the handle clockwise until the proper suction is indicated as described in Section 3.

Normal Operation

At this point, the system's cooling fans will start-up and the oxygen concentrator will begin operating. The green power indicator should be illuminated and the red vacuum indicator should turn off when sufficient vacuum is obtained. The green ozone indicator should then illuminate.

If the indicator lights are OK and the flowmeter is reading the proper flow (refer to specification label in unit), then the ozone generator is producing ozone and the injector assembly is injecting the ozone into the pool return/inlet line.

Make further adjustments to the injector bypass valve until vacuum light turns off and the ozone light turns on. **NOTE: Do not exceed the max air/oxygen flow rate specification as indicated on the specification sticker.**

If you experience complications, see TROUBLESHOOTING Section 4 or call 800.831.7133 for assistance.

System Shut-Down

The following sequence of steps must be followed for servicing or for storage.

1. Unplug the ozone generator.
2. Close the ozone isolation valve on the ozone supply line.

WARNING: Pool pump flow must not be shut-down when the ozone generator is operating. Doing so may cause water to back flow into the system and damage the generator module.

SECTION 4 Maintenance & Service

System Electro-Mechanical Overview

Refer to Figure 4 for component locations.

Indicator Lights

1. Main Power: Green light indicates that power is being supplied to the ozone generator. Compressor should be running.
2. Ozone Power: Green light indicates that power is being supplied to the high voltage Corona Discharge circuit and that ozone is being produced.
3. Vacuum: Red light indicates a vacuum fault. When sufficient suction is being supplied from the venturi injector, the red light will turn off.

Internal Components

1. Corona Discharge (CD) Module: The generator module consists of a high voltage electrode wrapped around a PTFE core inserted in a ceramic insulating tube. The assembly is encased in a thermally protected aluminum heat sink.
2. Power Supply: The fuse protected, self-regulated, high voltage/high frequency power supply provides the ideal electrical signal for efficient ozone production.
3. Air Compressor: Compressor produces and supplies compressed air to oxygen concentrator.
4. Oxygen Concentrator: Supplies concentrated, dry, oxygen feed gas to the ozone generator.
5. Lo Limit Vacuum Switch: If the vacuum in the ozone output supply line falls below 2 in. Hg the switch will open causing the system to shut-down.
6. Ventilation Fan: Cooling fan operates whenever the ozone generator is plugged in.
7. Intake Screens: Easily removable screens keep debris from entering the enclosure. See Figure 3.
Preventative Maintenance Schedule
The ozone generator system requires very little maintenance beyond general housekeeping practices.

DAILY:
1. Check ozone generator for proper operation.
2. Make sure red indicator light is not illuminated.
3. Make sure flow meter is indicating proper air flow.

MONTHLY:
1. Clean intake screens.
2. Perform general cleaning of cabinet interior.
3. Visually inspect compressor filter element.
   Replace as required.
4. Visual inspection of all plumbing, mechanical, and wiring in system.

ANNUALLY:
1. Replace ozone supply line check valve.
2. Replace oxygen supply line check valve.
3. Verify oxygen output.

EVERY 8,750 HOURS:
1. Rebuild air compressor.

Troubleshooting
Knowledge of electrical applications is required for troubleshooting. Contact a certified electrician if you are unsure of your ability to service the equipment. Improper servicing will void generator warranty. If any condition persists, call 800.831.7133 for technical assistance.

Symptom: “POWER” light out when system plugged in and door is closed.
1. No power to the generator:
   a. Check the circuit breaker at the facility power distribution box.
   b. Check for loose connections or wiring breaks from the power distribution box to the generator.

Symptom: “OZONE” indicator light out.
1. Ozone power fuse is bad.
   a. Check fuse and replace if necessary.
2. Loss of vacuum.
   a. Check red vacuum indicator light. If light is on refer to corresponding symptom and corrective action below.
3. Ozone cell high temperature.
   a. Check operation of ventilation fan.
   b. Check intake screens for obstruction of air flow.

Symptom: “VACUUM” indicator light is on
indicating out of range vacuum being supplied.
1. Injector not supplying adequate suction.
   a. Check pump and ensure water is flowing through injector.
   b. Check by-pass valve and adjust if necessary to obtain proper pressure differential in order to re-establish suction.

**Symptom:** CD Module is not operating. Ozone output has dropped.
1. No power to the generator module from the power supply:
   a. Check fuse(s).
   b. Check H.V. cables for breaks or loose connections, replace if necessary.
   c. Check for power at input terminals of the H.V. power supply.*
*WARNING! HIGH VOLTAGE.

**Symptom:** No air flow through the generator. The air flow meter indicates 0 scfh flow.
1. Injector not set properly.
   a. Adjust injector by-pass valve until proper air flow is indicated.
2. Air compressor is not operating properly.
   a. Listen for air compressor operation.
   b. Check all tubing connections from the air compressor through the system for leaks.
3. Ozone supply tubing damaged.
   a. Check tubing for blockage or kinks.
   b. Check for loose or damaged fittings.

**SECTION 5 Replacement Parts and Order Information**

**Ordering information**
For replacement parts call 800.831.7133
Be prepared with the following information:
- Model Number
- Serial Number
- Date Purchased
LIMITED WARRANTY

Pentair Aquatic Systems warrants the IntelliZone™ Commercial Ozone Generator (Models CD-2 (521655), CD-5 (521656), CD-7 (521658) as follows:

Limited Warranty: Pentair warrants the (Models CD-2 (521655), CD-5 (521656), CD-7 (521658) to be free from defects in material and/or workmanship for a period of two (2) years from the original date of installation.

Exceptions that shall result in Pentair’s denial of a warranty claim:
1. Damage caused by careless handling, improper repackaging, or shipping.
2. Damage due to misapplication, misuse, abuse or failure to operate equipment as specified in the (Models CD-2 (521655), CD-5 (521656), CD-7 (521658) Installation and User’s Guide.
3. Damage caused by failure to install products as specified in the (Models CD-2 (521655), CD-5 (521656), CD-7 (521658) Installation and User’s Guide.
4. Damage due to unauthorized product modifications or alterations, or failure to use Pentair original replacement parts.
5. Damage caused by negligence, or failure to properly maintain products as specified in the (Models CD-2 (521655), CD-5 (521656), CD-7 (521658) Installation and User's Guide.
6. Damage due to failure to maintain water chemistry in conformity with the standards set forth in the (Models CD-2 (521655), CD-5 (521656), CD-7 (521658) Installation and User’s Guide.
7. Damage caused by water scaling, freezing or any conditions causing inadequate water circulation.
8. Accidental damage, fire, acts of God, or other circumstances outside the control of Pentair.

- This warranty extends to the original retail owner (Customer) only, beginning on the date of installation and is not enforceable by any other party. Proof of purchase and/or date of installation will be required for all warranty claims. Customer agrees to pay all shipping charges to Pentair.

- Warranties by others: Some products incorporate components manufactured by other manufacturers. Some of these provide warranties in addition to the warranty provided herein. In all such cases a copy of that warranty will be provided with the product. To the extent protection provided under any such third party warranty exceeds the Limited Warranty provided herein, the Customer must look only to that other manufacturer for the additional warranty protection.

Warranty Obligations of Pentair: Should a defect in workmanship and/or material in any item covered by this warranty become evident during the term of the warranty, then upon the Customer following the procedures set forth below, Pentair will, at its option, repair or replace such item or part at its own cost and expense. Pentair’s maximum obligation under this warranty is limited to the repair and replacement of the (Models CD-2 (521655), CD-5 (521656), CD-7 (521658). Pentair disclaims all other expressed or implied warranty obligations.

Pentair is not, however, responsible under this warranty for any cost of shipping or transportation of the equipment or parts thereof to or from Pentair’s Technical Service Department. Also, Pentair is not liable for any loss of time, inconvenience, incidental expenses such as telephone calls, labor or material charges incurred in connection with the removal or replacement of the equipment, or any other incidental or consequential damages, including but not limited to damage to pool equipment or any surface in or around the pool in which the (Models CD-2 (521655), CD-5 (521656), CD-7 (521658) is installed.

PLEASE NOTE: Some states do not allow the exclusion or limitation of incidental, or consequential damages, so the above limitation or exclusion may not apply to you.

No Other Warranties: TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, PENTAIR DISCLAIMS ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Procedure for Obtaining Performance: In order to obtain the benefits of this warranty, the Customer who made the original retail purchase must contact the Pentair Technical Service Department upon discovery of the defect, but in no event later than the expiration date of the warranty period provided in this warranty. Upon receipt of this communication, Pentair will promptly notify the Customer of the address to which the defective item may be shipped. The Customer shall then ship the item, freight prepaid, to the address indicated, together with a “RETURN GOODS AUTHORIZATION” form obtained from Pentair’s Technical Service and a brief description of the problems encountered. Unauthorized returns will not be accepted. Freight must be prepaid by customer.

Warranties or Representations by Others: No dealer or other third party entity has any authority to make any warranties or representations concerning Pentair or its products. Accordingly, Pentair is not responsible for any such warranties or representations. Other Rights: This warranty gives you specific legal rights and you may also have other rights, which vary from state to state. This warranty supersedes all previous publications.

Pentair Aquatic Systems.
1620 Hawkins Ave. Sanford, NC 27330 - 10951 W. Los Angeles Ave. Moorpark, CA 93021 - Phone 800-831-7133 - Fax 800-284-4151
APPENDIX - SAFETY

OZONE Material Safety Data Sheet

SECTION I: MATERIAL IDENTIFICATION

IDENTITY: OZONE (Gaseous)  ISSUED: February, 1992
FORMULA: O₃  REVISED: April 3, 2012

Description (origin/uses): Occurs in atmosphere from UV light action on oxygen at high altitude. Commercially obtained by passing air between electrodes carrying a high voltage alternating current. Also found as a by-product in welding areas, high voltage equipment, or UV radiation.

Ozone is used as an oxidizing agent in air and water disinfection: for bleaching textiles, oils, and waxes; organic synthesis as in processing certain perfumes, vanillin, camphor; for mold and bacteria control in cold storage.

Cautions: A powerful oxidizing agent, ozone generally exists as a gas and is highly chemically reactive. Inhalation produces various degrees of respiratory effects from irritation to pulmonary edema (fluid in lungs) as well as affecting the eyes, blood, and central nervous system.

Manufacturer/Supplier: On-site generation, equipment available from various suppliers, including:

DEL Ozone  Phone: (805) 541-1601
3580 Sueldo Street
San Luis Obispo, CA 93401
FAX: (805) 541-8459

SECTION II: INGREDIENTS AND HAZARDS

Ozone, CAS No. 10028-15-6: NIOSH RTECS No. RS8225000

1991 OSHA PELs
8-hr TWA: 0.1 ppm vol. (0.2 mg/m³)
15-min STEL: 0.3 ppm vol (0.6 mg/m³)

1990 IDLH
10 ppm

1990 NIOSH REL
Ceiling: 0.1 ppm vol. (0.2 mg/m³)

1990-1992 ACGIH TLV
Ceiling: 0.1 ppm (0.2 mg/m³)

1991-1992 ACGIH TLV
Ceiling: 0.1 ppm (0.2 mg/m³)

1990 DFG (Germany) MAK
TWA: 0.1 ppm (0.2 mg/m³)
Category 1: Local Irritant
Peak Exposure Limit: 0.2 ppm
5 min momentary value, 8 per shift

Other Designations: Triatomic oxygen: CAS No. 10028-15-6, NIOSH RTECS No. RS8225000

SECTION III: PHYSICAL DATA

Boiling Point: -169° F
Vapor Pressure: >1 ATM
Vapor Density (AIR = 1): 1.6
Solubility in Water: 0.49 ml @ 32° F (0° C), 3 ppm @ 20 °C

Melting Point: -315.4° F (-193° C)
% Volatile by Volume: 100%
Molecular Weight: 48 Grams/Mole
pH: Not Listed
Critical Temperature: 10.22° F (-12.1° C)

Appearance and Odor: Colorless to blue gas (greater than -169° F); characteristic odor often associated with electrical sparks or lightning in concentrations of less than 2 ppm and becomes disagreeable above 1-2 ppm. CAUTION: Olfactory fatigue develops rapidly, so do not use odor as a preventative warning device.

SECTION IV: FIRE AND EXPLOSION HAZARD DATA

Flash Point: Nonflammable
Extinguishing Media: Use large amounts of water spray or fog to put out fires involving ozone. Use appropriate fire-fighting techniques to deal with surrounding material.

Special Fire Fighting Procedures: Wear a self contained breathing apparatus with full face pieces operated in a pressure-demand or other positive-pressure mode.

Unusual Fire/Explosion Hazards: Decomposition of ozone into oxygen gas, (O₂), can increase strength of fire.

SECTION V: REACTIVITY DATA

Stability: Ozone is not stable. Hazardous polymerization cannot occur.

Chemical Incompatibilities: Ozone is chemically incompatible with all oxidizable materials, both organic and inorganic.

Conditions to Avoid: Ozone is unstable at room temperatures and spontaneously decomposes to oxygen gas. Avoid ignition sources such as heat, sparks, and open flame. Keep away from strong reducing agents and combustible materials such as grease, oils, and fats.

Products of Hazardous Decomposition: Ozone spontaneously decomposes to oxygen gas, even at room temperatures.

4-0697_Rev.C
SECTION VI: HEALTH HAZARD DATA

Carcinogenicity:  Ozone is not listed as a carcinogen by the NTP, IARC, or OSHA.

Primary Entry:  Inhalation

Target Organs:  Respiratory system, eyes, blood.

Summary of Risks:  There is no true threshold limit and so no exposure (regardless of how small) is theoretically without effect from ozone’s strong oxidative ability. Ozone passes straight to the smallest bronchioles and alveoli and is not absorbed by mucous membranes along the way. Initial small exposure may reduce cell sensitivity and/or increase mucous thickness producing a resistance to low ozone levels. Short exposure to 1-2 ppm concentrations causes headache as well as irritation to the respiratory tract, but symptoms subside when exposure ends. High concentrations of ozone produce severe irritation of the eyes and respiratory tract. Exposure above the ACGIH/OSHA limits produce nausea, chest pain, coughing, fatigue, reduced visual acuity, and pulmonary edema. Symptoms of edema from excessive exposure can be delayed one or more hours. Inhalation of >20 ppm for an hour or more (>50 ppm for 1/2 hour) can be fatal.

Acute Effects:  Acute damage from ozone appears to be mainly from its oxidizing effect on contact with tissue.

Chronic Effects:  Respiratory disease. Deleterious effects on lungs and acceleration of tumors have been reported.

Medical Conditions Generally Aggravated by Long-Term Exposure:  History of respiratory or heart disorders.

First Aid:  Remove from ozone containing air, get prompt medical help*, administer oxygen if necessary.

Eye Contact - Gently lift eyelids and flush eyes continuously with flooding amounts of water for 15 minutes or until transported to a medical facility*.

Inhalation - Remove exposed person to fresh air, support breathing, administer humidified oxygen as needed, get medical help*.

Ingestion - Highly unlikely since ozone is a gas until -169°C F.

* GET MEDICAL ASSISTANCE = APPROPRIATE IN-PLANT, PARAMEDIC, or COMMUNITY. Get prompt medical assistance for further treatment, observation, and support after first aid.

SECTION VII: PRECAUTIONS FOR SAFE HANDLING AND USE

Steps to be Taken in Case of Spill/Leak:
1. Discontinue production
2. Isolate and vent area
3. Immediately notify personnel
4. Deny entry
5. Follow applicable OSHA regulations

Disposal:  Provide ventilation to dilute and disperse small amounts of ozone (below OSHA PELs) to outside atmosphere. Follow federal, state, and local regulations.

Handling/Storage Precautions:  Ensure proper personnel training and establish emergency procedures.

SECTION VIII: CONTROL MEASURES

Respiratory Protection:  High Level (>10 ppm) - Self Contained Breathing Apparatus: MISH/NIOSH approved.
Low Level (0.3 - 10 ppm) - Canister Type (carbon) respirator may be used.

Eye Protection:  Wear chemical safety goggles if necessary to work in high ozone (>10 ppm).

Skin Protection:  Effects of ozone on skin are minimal to non-existent.

Ventilation:  Provide general and local exhaust ventilation to dilute & disperse small amounts of ozone into outside atmosphere.

SECTION IX: SPECIAL PRECAUTIONS AND COMMENTS

Storage Segregation:  Prevent ozone from coming into direct physical contact with strong acids or bases or with strong oxidizing/reducing agents.

Engineering Controls:  Install ventilation systems capable of maintaining ozone to concentrations below the ACGIH/OSHA exposure limits (see sect. II). Install ambient ozone monitor(s) configured to shut down ozone equipment and turn high speed ventilation on.

V EMERGENCY AND FIRST AID PROCEDURES

Eye Contact
If exposure to water containing aqueous solution of ozone causes irritation to eyes, flush eyes with plenty of clean, ozone free, running water for at least 15 minutes, lifting the upper and lower lids occasionally. Remove contact lenses if worn. Seek medical attention if irritation persists.

Skin Contact
Not likely to become irritated unless repeatedly exposed to large volumes of material. If irritation develops, rinse affected area with ozone free potable water. If irritation continues seek medical advice.

Inhalation
Inhalation of mists could lead to irritation of lungs. If symptoms develop, move individual away from exposure and into fresh air. If symptoms persist, seek medical attention.

Ingestion

### IX SPECIAL PRECAUTIONS

**Precautionary Labeling**
Certified testing of DEL Ozone systems by NSF (National Sanitation Foundation) has shown that under normal conditions of use, aqueous solutions containing low levels of ozone gas dissolved in potable water do not present a safety hazard when contact to the individual is incidental. When used in a room with normal ventilation, levels of ozone gas being released into the air have been shown by NSF to be well below the periodic exposure levels established by OSHA for worker safety through the use of DEL’s ozone management technology.

**Precautions To Be Taken In Handling**
Aqueous solutions of ozone in potable water should not be sprayed as an aerosol (i.e. >20psi) to avoid releasing higher levels of ozone gas into the work area. The decay rate of ozone gas is a function of temperature and exposure to organic material. Certified testing has shown that when ozone gas has been properly dissolved in ambient temperature (or colder (33 – 70 °F)) potable water at a level not exceeding 2 mg/l (ppm) using DEL’s ozone management technology, the rate at which ozone is released from the water as ozone gas is below the PEL established for gaseous ozone.
