IMPORTANT SAFETY INSTRUCTIONS

READ AND FOLLOW ALL INSTRUCTIONS.

• Read this manual completely before attempting installation.
• Risk of Electric Shock. Install the ozone unit and any metallic plumbing associated with the unit at least 5 ft from the inside wall of tub or pool.
• Risk of Electric Shock. Connect this ozone generator in accordance with the installation instructions. Do not install within an enclosure that would restrict ventilation.
• Follow all applicable electrical codes.
• Electric shock hazard. Be sure to turn power OFF at power source before any service work is performed. Failure to do so could result in serious injury or death.
• Warning – Short term inhalation of high concentrations of ozone and long term inhalation of low concentrations of ozone can cause serious harmful physiological effects. DO NOT inhale ozone gas produced by this device.
• For your safety, do not store or use gasoline, chemicals or other flammable liquids or vapors near this or any other appliance.
• A spontaneous and violent ignition may occur if oil, grease or greasy substances come in contact with oxygen under pressure. These substances must be kept away from oxygen regulators, cylinder valves tubing and connections, and all other oxygen equipment.

SAVE THESE INSTRUCTIONS!
SECTION 1 General Information

Description
The IntelliZone™ Commercial Ozone Generator (model number CD-45GV - 521661 and 521763) described in this manual is designed to provide the benefits of ozonated water in an environmentally safe and effective manner. The high quality, specially engineered components ensure efficient ozone output and reliable performance.

The ozone generator is safe and harmless to your equipment if installed properly.

Specifications
For detailed specifications refer to the ozone generator specification label located on the inside of the door on the unit.

Ozone Output:
Ozone output (+10%): 45 g/hr
Flow rate (max): 30 scfh
% weight O₃: 4.0

Power Requirements:
Domestic: 120 VAC 60Hz
Export: 230 VAC 50Hz
Overcurrent Protection: 20 A

Cooling Water Requirements:
0.2 GPM (.4 lpm) of clean, filtered, fresh water.

NOTE: Typical pool water may be used for cooling. Generator efficiency and life will be improved at inlet temperatures of 80°F or less.

Inlet temperature: 50°F - 90°F (10°C - 32°C)
Inlet pressure: 15.0 - 40 psi (100 - 270 kPa)

Location Requirements*:
Mounting: Floor or wall mount in a clean, protected area using supplied brackets.
Ambient Temp.: 40°F - 100°F (5°C - 38°C)

* Protection from weather elements must be provided for outdoor installations. Operating outside of the recommended temp. ranges may result in damage not covered under the manufacturer’s warranty.

SECTION 2 Installation

Location
The ozone generator is designed for either floor or wall mounting in a clean, protected area, either indoors or outdoors. Locate generator out of reach of sprinklers or drainage spouts. Allow sufficient access for maintenance and all tubing and electrical wires. Generators must not be placed in locations where ambient ozone levels exceed 0.01 PPM.

Mounting
NOTE: Do not remove compressor packing material until unit has been mounted.

Wall Mount Option
1. Attach two mounting brackets to wall using anchors appropriate for mounting surface. See Figure 1.
   Note: Mount so that bottom of enclosure is at least 4" above the ground.
2. Using 1/4"-20 bolts (with washers as shown) secure generator to mounts.

Floor Mount Option
1. Use the four 1/4"-20 bolts with washers to secure feet to bottom of cabinet.
2. Stand upright and securely fasten to concrete slab using appropriate anchors and bolts.

Electrical

Figure 1: Wall Mount
Refer to the units specification label and local electrical codes for information on proper electrical connection.

**Main power circuit:** Unit is supplied with a 1/2” conduit elbow. Wire unit to a dedicated Breaker (30 AMP) installed in accordance with electrical codes.

**Plumbing**
Ozone gas is introduced to the circulation line using a venturi injector. Suction developed by the venturi allows the CD to operate safely under vacuum. See installation manual for 521683 or 521684 for proper venturi installation.

**Ozone Gas Line**
1. Connect ozone tubing to generator outlet fitting. (3/8” stainless steel compression fitting.)
2. Connect opposite end of ozone tubing to injector suction port. (Suction port fitting: 3/8” stainless steel compression fitting.) *See Figure 2.*

**NOTE:** The ozone gas supply line must be made of PTFE or stainless steel and have a back flow prevention device (such as a check valve) installed between the ozone generator cabinet and the point of injection to prevent water from backing up into the generator system. An ozone supply check valve is included with the 521683 or 521684 system.

**Cooling Water**
Cooling water must be supplied as specified in Section 1.

1/4” FPT connections are supplied on the generator. *See Figure 2.* Be sure that the tubing is appropriately matched with the marked inlet and outlet ports. Carefully match and connect to water plumbing as shown in Figure 2. Alternate method using connections at injector may be used.

**SECTION 3 Operation**

*Figure 2: Plumbing Schematic - Example of Swimming Pool Application*
Initial System Start-Up

Upon completing all of the generator system connections, you are ready to begin start-up procedures.
1. Check electrical fittings.
2. Check for proper voltage.
3. Turn on circulation pump.
4. Check for leaks.
5. Check cooling water.
6. Turn main power switch to "ON" position.
7. Adjust injector by-pass to attain required vacuum. (Green "Vacuum" light will go on.)

NOTE: Do not jog or immediately restart the system. Compressors require approximately 5 seconds to decompress.

Normal Operation

With the power switch "ON", the system's compressors and cooling fans will start up, the oxygen concentrator will begin operating, and the output solenoid valve will open. Move the Ozone Output switch from "OFF." Approximately 1 minute after proper vacuum is attained, the last indicator ("Ozone Power") will turn on. The ozone generator will be producing ozone and injecting it into the process line.

All (6) indicator lights should be lit, and flow meter should indicate gas flow. If the optional ORP Controller is installed, it should be displaying a reading from the sensor probe and will automatically cycle the generator on and off as needed to maintain water quality. Residual ORP levels will vary per application.

However, the system will not start under any of the following conditions:
1. The system will not start-up if the door is not secured. A door interlock switch is incorporated into the system enclosure.
2. If the optional ORP controller is installed the ozone will not turn on if the ORP level is already above the setpoint of the ORP controller.
3. The ozone will not turn on if there is not enough vacuum being generated by water flow through injector. Green "Vacuum/Pressure" light will go on when proper vacuum is attained.
4. Ozone will not turn on if there is too much vacuum. Green "Vacuum/Pressure" light will go on when proper vacuum is attained.

If you experience complications, see TROUBLESHOOTING Section 4 or call 800.831.7133 for assistance.

System Shut-Down

The IntelliZone ozone generator is a specialized water cooled device that must be properly protected during shut-down/storage periods. The following sequence of steps must be used for servicing or for storage.
1. Toggle the main system power switch to the "OFF" position to shut-down generator.
2. After the generator has been shut-down, the process water circulation pump may be turned off.
3. If the system is going to be shut-down and stored during freezing weather, it is very important that the cooling water be drained to protect it from rupture or damage.

NOTE: Process water flow must not be shut-down when the ozone generator is operating. Doing so may cause water to backflow into the system and damage the generator cells.

SECTION 4 Maintenance & Service

System Electro-Mechanical Overview
Refer to Figure 4 for component locations.

Indicator Lights
1. Main Power: Indicates that power is being supplied to the ozone generator.
2. Auxiliary Switch: Indicates condition of flow switch and/or ambient ozone monitor.
3. Water Backflow Detected: Indicates system is free from water backflow into generator.
4. Temperature: Indicates that cooling water, ambient air, and compressor air temperatures are OK.
5. Vacuum/Pressure: Indicates proper gas system operation. Light will go out for either low or high vacuum conditions, or low pressure.
6. Ozone Power: Indicates that power is being supplied to the high voltage Corona Discharge circuits and that ozone is being produced.

Remaining External Components
1. Main Power Switch: Power switch is used for system start-up and shut-down. Switch activates the control system allowing the generator to start-up.
2. Flowmeter: Flowmeter indicates the oxygen
flow through the system.

3. Circuit Breaker: Circuit breaker protects the generator from over current conditions. Push the breaker button to reset.

4. ORP Controller (optional): ORP controller receives a millivolt (mV) signal from the ORP sensor mounted in the process water line. ORP (Oxidation-Reduction Potential) is a measure of the relative oxidation strength of the water. As ozone is added to the water system the ORP level will rise. As ozone is used up in the water system the ORP level will drop. The ORP controller continuously analyzes the sensor signal, compares it to the setpoint that has been programmed, indicates the ORP level on the digital display, and relays the signal to the ozone generator.

5. Ozone Output Switch: Controls ozone output concentration by adjusting the number of power supplies operating.

6. Dissolved Ozone Monitor (optional): Monitoring system designed for the continuous measurement of ozone gas in solution. The operating range of the system may be selected by the user from 0-2.00 PPM or from 0-20.00 PPM. The basic sensing element used is polarographic membraned sensor which measures ozone directly.

Internal Components
1. Ozone Cell Assembly: Cells are made of two aluminum halves. Enclosed in the aluminum halves are a ceramic tube, coil type high voltage electrode and a PTFE rod.

2. High Voltage Supply(s): Power supplies raise incoming line voltage and frequency to deliver it to the cells. Each power supply is rated at 100W.

3. Air Compressors: Compressors produce and supply compressed air to oxygen concentrator.

4. Oxygen Concentrator: Supplies concentrated, dry, oxygen feed gas to the ozone generator.

5. Vacuum Switches: Interrupt system if vacuum is too low (less than 1.5 inHg) or too high (greater than 7 inHg).

6. Vacuum Regulator: Regulates the oxygen flow into the generator cell based on a vacuum setpoint (factory set to 3-5 in. Hg). When the sufficient suction is being developed by the injectors downstream the regulator will allow full flow to pass. As suction is reduced, flow is restricted proportionally to maintain the vacuum set point. If suction is lost completely, flow is cut off.

7. Water Backflow: Backflow preventor senses water present in ozone tubing in generator. If water is detected, system will close solenoid valve to prevent additional water backflow from occuring. Water in the generator will cause severe damage to the high voltage electrodes.

8. Ventilation Fan: Cooling fan operates when main power switch is “ON”.

10. Door Interlock Switch: Interlock switch will shut down entire system if door is opened. Securing the door will bring the system back into operation.

11. Relay Panel: Contains control relays for system interlocks, indicator lights and main power control.

12. Hour Meter: Indicates total system operating time in hours.

13. Pressure Switch: Interrupts system if pressure from compressors falls below 25 psig.

14. Temperature Switches: Interrupt system if Ozone Cell Cooling Plate, Compressor Air, or Enclosure Intake Air Temperatures exceed maximum limits.

15. Compressor Filters: Remove particles from compressor intake air. Top of canister is removed to access replaceable element (See Section 5B for part number).

16. Moisture Separator: Filters and removes moisture from compressed air. Remove bowl to access replaceable element (See Section 5 for part number).

Preventative Maintenance Schedule
Regular maintenance should be performed to avoid damage to the system, more costly repairs and to keep the warranty active. For instance, the compressor should be rebuilt every 8,750 hours to prevent the reduction in air-pressure and flow. If the compressor is not rebuilt, oxygen concentrator sieve beds will become plugged and unusable, creating more costly problems. If the generator cells are not cleaned or replaced annually, a lower ozone output will result.

DAILY:
Check ozone generator for proper operation.
- Make sure all appropriate green indicator lights are lit.
- Make sure flow meter is indicating proper air flow.

LIMITED WARRANTY

Pentair Aquatic Systems warrants the IntelliZone™ Commercial Ozone Generator (Models CD-45GV (521661 and 521763) as follows:

Limited Warranty: Pentair warrants the (Models CD-45GV (521661 and 521763) to be free from defects in material and/or workmanship for a period of two (2) years from the original date of installation.

Exceptions that shall result in Pentair’s denial of a warranty claim:
1. Damage caused by careless handling, improper repackaging, or shipping.
2. Damage due to misapplication, misuse, abuse or failure to operate equipment as specified in the (Models CD-45GV (521661 and 521763) Installation and User's Guide.
4. Damage due to unauthorized product modifications or alterations, or failure to use Pentair original replacement parts.
5. Damage caused by negligence, or failure to properly maintain products as specified in the (Models CD-45GV (521661 and 521763) Installation and User's Guide.
6. Damage caused by failure to maintain water chemistry in conformity with the standards set forth in the (Models CD-45GV (521661 and 521763) Installation and User's Guide.
7. Damage caused by water scaling, freezing or any conditions causing inadequate water circulation.
8. Accidental damage, fire, acts of God, or other circumstances outside the control of Pentair.

• This warranty extends to the original retail owner (Customer) only, beginning on the date of installation and is not enforceable by any other party. Proof of purchase and/or date of installation will be required for all warranty claims. Customer agrees to pay all shipping charges to Pentair.

• Warranties by others: Some products incorporate components manufactured by other manufacturers. Some of these provide warranties in addition to the warranty provided herein. In all such cases a copy of that warranty will be provided with the product to the extent protection provided under any such third party warranty exceeds the Limited Warranty provided herein, the Customer must look only to that other manufacturer for the additional warranty protection.

Warranty Obligations of Pentair Water: Should a defect in workmanship and/or material in any item covered by this warranty become evident during the term of the warranty, then upon the Customer following the procedures set forth below, Pentair will, at its option, repair or replace such item or part at its own cost and expense. Pentair's maximum obligation under this warranty is limited to the repair and replacement of the (Models CD-45GV (521661 and 521763). Pentair disclaims all other expressed or implied warranty obligations.

Pentair is not, however, responsible under this warranty for any cost of shipping or transportation of the equipment or parts thereof to or from Pentair's Technical Service Department. Also, Pentair is not liable for any loss of time, inconvenience, incidental expenses such as telephone calls, labor or material charges incurred in connection with the removal or replacement of the equipment, or any other incidental or consequential damages, including but not limited to damage to pool equipment or any surface in or around the pool in which the (Models CD-45GV (521661 and 521763) is installed.

PLEASE NOTE: Some states do not allow the exclusion or limitation of incidental, or consequential damages, so the above limitation or exclusion may not apply to you.

No Other Warranties: TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, PENTAIR DISCLAIMS ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Procedure for Obtaining Performance: In order to obtain the benefits of this warranty, the Customer who made the original retail purchase must contact the Pentair Technical Service Department upon discovery of the defect, but in no event later than the expiration date of the warranty period provided in this warranty. Upon receipt of this communication, Pentair will promptly notify the Customer of the address to which the defective item may be shipped. The Customer shall then ship the item, freight prepaid, to the address indicated, together with a "RETURN GOODS AUTHORIZATION" form obtained from Pentair's Technical Service and a brief description of the problems encountered. Unauthorized returns will not be accepted. Freight must be prepaid by customer.

Warranties or Representations by Others: No dealer or other third party entity has any authority to make any warranties or representations concerning Pentair or its products. Accordingly, Pentair is not responsible for any such warranties or representations.

Other Rights: This warranty gives you specific legal rights and you may also have other rights, which vary from state to state. This warranty supersedes all previous publications.

Pentair Aquatic Systems.

APPENDIX
SAFETY

OZONE Material Safety Data Sheet

SECTION I: MATERIAL IDENTIFICATION

IDENTITY: OZONE (Gaseous)  ISSUED: February, 1992
FORMULA: O _3_  REVISED: April 3, 2012

Description (origin/uses): Occurs in atmosphere from UV light action on oxygen at high altitude. Commercially obtained by passing air between electrodes carrying a high voltage alternating current. Also found as a by-product in welding areas, high voltage equipment, or UV radiation.

Ozone is used as an oxidizing agent in air and water disinfection: for bleaching textiles, oils, and waxes; organic synthesis as in processing certain perfumes, vanillin, camphor; for mold and bacteria control in cold storage.

Cautions: A powerful oxidizing agent, ozone generally exists as a gas and is highly chemically reactive. Inhalation produces various degrees of respiratory effects from irritation to pulmonary edema (fluid in lungs) as well as affecting the eyes, blood, and central nervous system.

Manufacturer/Supplier: On-site generation, equipment available from various suppliers, including:
DEL Ozone
3580 Sueldo Street
San Luis Obispo, CA 93401
Phone: (805) 541-1601
FAX: (805) 541-8459

SECTION II: INGREDIENTS AND HAZARDS

Ozone, CAS No. 10028-15-6: NIOSH RTECS No. RS8225000

1991 OSHA PELs
8-hr TWA: 0.1 ppm vol. (0.2 mg/m^3)
15-min STEL: 0.3 ppm vol (0.6 mg/m^3)
1990 IDLH
10 ppm
1990 NIOSH REL
Ceiling: 0.1 ppm vol. (0.2 mg/m^3)

Other Designations: Triatomic oxygen: CAS No. 10028-15-6, NIOSH RTECS No. RS8225000

SECTION III: PHYSICAL DATA

Boiling Point: -169°F
Vapor Pressure: >1 ATM
Vapor Density (AIR = 1): 1.6
Solubility in Water: 0.49 ml @ 32°F (0°C), 3 ppm @ 20°C

Melting Point: -315.4°F (-193°C)
% Volatile by Volume: 100%
Molecular Weight: 48 Grams/Mole
pH: Not Listed
Critical Temperature: 10.22°F (-12.1°C)

Appearance and Odor: Colorless to blue gas (greater than -169°F): characteristic odor often associated with electrical sparks or lightning in concentrations of less than 2 ppm and becomes disagreeable above 1-2 ppm. CAUTION: Olfactory fatigue develops rapidly, so do not use odor as a preventative warning device.

SECTION IV: FIRE AND EXPLOSION HAZARD DATA

Flash Point: Nonflammable
Extinguishing Media: Use large amounts of water spray or fog to put out fires involving ozone. Use appropriate fire-fighting techniques to deal with surrounding material.

Special Fire Fighting Procedures: Wear a self contained breathing apparatus with full face pieces operated in a pressure-demand or other positive-pressure mode.

Unusual Fire/Explosion Hazards: Decomposition of ozone into oxygen gas, (O_2_), can increase strength of fire.

SECTION V: REACTIVITY DATA

Stability: Ozone is not stable. Hazardous polymerization cannot occur.

Chemical Incompatibilities: Ozone is chemically incompatible with all oxidizable materials, both organic and inorganic.

Conditions to Avoid: Ozone is unstable at room temperatures and spontaneously decomposes to oxygen gas. Avoid ignition sources such as heat, sparks, and open flame. Keep away from strong reducing agents and combustible materials such as grease, oils, and fats.

Products of Hazardous Decomposition: Ozone spontaneously decomposes to oxygen gas, even at room temperatures.

4-0697_Rev.C
SECTION VI: HEALTH HAZARD DATA

Carcinogenicity: Ozone is not listed as a carcinogen by the NTP, IARC, or OSHA.

Primary Entry: Inhalation

Target Organs: Respiratory system, eyes, blood.

Summary of Risks: There is no true threshold limit and so no exposure (regardless of how small) is theoretically without effect from ozone’s strong oxidative ability. Ozone passes straight to the smallest bronchioles and alveoli and is not absorbed by mucous membranes along the way. Initial small exposure may reduce cell sensitivity and/or increase mucous thickness producing a resistance to low ozone levels. Short exposure to 1-2 ppm concentrations causes headache as well as irritation to the respiratory tract. Symptoms subside when exposure ends. High concentrations of ozone produce severe irritation of the eyes and respiratory tract. Exposure above the ACGIH/OSHA limits produce nausea, chest pain, coughing, fatigue, reduced visual acuity, and pulmonary edema. Symptoms of edema from excessive exposure can be delayed one or more hours. Inhalation of >20 ppm for an hour or more (>50 ppm for 1/2 hour) can be fatal.

Acute Effects: Acute damage from ozone appears to be mainly from its oxidizing effect on contact with tissue.

Chronic Effects: Respiratory disease. Deleterious effects on lungs and acceleration of tumors have been reported.

Medical Conditions Generally Aggravated by Long-Term Exposure: History of respiratory or heart disorders.

First Aid: Remove from ozone containing air, get prompt medical help*, administer oxygen if necessary.

Eye Contact - Gently lift eyelids and flush eyes continuously with flooding amounts of water for 15 minutes or until transported to a medical facility*.

Inhalation - Remove exposed person to fresh air, support breathing, administer humidified oxygen as needed, get medical help*.

Ingestion - Highly unlikely since ozone is a gas until -169°F.

* GET MEDICAL ASSISTANCE = APPROPRIATE IN-PLANT, PARAMEDIC, or COMMUNITY. Get prompt medical assistance for further treatment, observation, and support after first aid.

SECTION VII: PRECAUTIONS FOR SAFE HANDLING AND USE

Steps to be Taken in Case of Spill/Leak:
1. Discontinue production
2. Isolate and vent area
3. Immediately notify personnel
4. Deny entry
5. Follow applicable OSHA regulations

Disposal: Provide ventilation to dilute and disperse small amounts of ozone (below OSHA PELs) to outside atmosphere. Follow federal, state, and local regulations.

Handling/Storage Precautions: Ensure proper personnel training and establish emergency procedures.

SECTION VIII: CONTROL MEASURES

Respiratory Protection: High Level (>10 ppm) - Self Contained Breathing Apparatus: MISH/NIOSH approved.
Low Level (0.3 - 10 ppm) - Canister Type (carbon) respirator may be used.

Eye Protection: Wear chemical safety goggles if necessary to work in high ozone (>10 ppm).

Skin Protection: Effects of ozone on skin are minimal to non-existent.

Ventilation: Provide general and local exhaust ventilation to dilute & disperse small amounts of ozone into outside atmosphere.

SECTION IX: SPECIAL PRECAUTIONS AND COMMENTS

Storage Segregation: Prevent ozone from coming into direct physical contact with strong acids or bases or with strong oxidizing/reducing agents.

Engineering Controls: Install ventilation systems capable of maintaining ozone to concentrations below the ACGIH/OSHA exposure limits (see sect. II). Install ambient ozone monitor(s) configured to shut down ozone equipment and turn high speed ventilation on.

## IX SPECIAL PRECAUTIONS

**Precautionary Labeling**

Certified testing of DEL Ozone systems by NSF (National Sanitation Foundation) has shown that under normal conditions of use, aqueous solutions containing low levels of ozone gas dissolved in potable water do not present a safety hazard when contact to the individual is incidental. When used in a room with normal ventilation, levels of ozone gas being released into the air have been shown by NSF to be well below the periodic exposure levels established by OSHA for worker safety through the use of DEL’s ozone management technology.

**Precautions To Be Taken In Handling**

Aqueous solutions of ozone in potable water should not be sprayed as an aerosol (i.e. >20psi) to avoid releasing higher levels of ozone gas into the work area. The decay rate of ozone gas is a function of temperature and exposure to organic material. Certified testing has shown that when ozone gas has been properly dissolved in ambient temperature (or colder (33 – 70 °F)) potable water at a level not exceeding 2 mg/l (ppm) using DEL’s ozone management technology, the rate at which ozone is released from the water as ozone gas is below the PEL established for gaseous ozone.
