IMPORTANT NOTICE

Attention Installer: These Installation Instructions contains important information about the installation, operation and safe use of this underwater pool and spa light. This Guide should be given to the owner and/or operator of this equipment.

Attention User: These Installation Instructions contains important information that will help you in operating and maintaining this product. Please retain it for future reference.

This innovative water effect is designed to be cast into the concrete deck or gunite sidewall of a swimming pool. It can also be mounted through the sidewall of a vinyl liner in-ground or above ground pool. It is furnished with five water effect eyeballs, one of which you will install in the body after the pool is complete.

It is recommended that you supply the Deck Jet water feature with filtered water. Also, if more than one Deck Jet water feature is used on this pool, we recommend that a PVC ball valve be used to control the flow to EACH effect. This is because the flow and pressure requirements are so low that any difference in water pressure caused by piping length will be noticed.

The supply piping to the Deck Jet water feature can be any size (1/2" recommended). The connection on the bottom of the body is 1 1/2" slip.

If the Deck Jet water feature is to be mounted into concrete or gunite:

1. Place the plastic parts bag in a safe location. This contains all the parts you will need to activate the water effects after the pool hardscape is complete.
2. Leave the red gunite shield pressed securely in the body to prevent contamination of the internal threads.
3. You will need to adapt your supply piping to the 1 1/2 " PVC slip connection with a reducing bushing. Glue the bushing to the body.
4. Glue the supply piping to the bushing.
5. Secure the body to prevent movement during the gunite/concrete placement. You can drill holes in the horizontal flange and wire the body to the rebar. Because the Deck Jet water feature is round, you can orient it in any direction.
6. The top flange of the shield plug should be flush with the FINAL prepared surface.

If the Deck Jet water feature is to be mounted into the sidewall of a vinyl lined pool:

1. Place the plastic parts bag in a safe location. This contains all the parts you will need to activate the water effects after the pool hardscape is complete.
2. Cut a 2-3/8" diameter hole, above water level, at the location desired.
3. Put a gasket on the body and insert the body through the hole from the outside.
4. Put on the remaining gasket, friction ring, and nut. Tighten the nut until the gasket is compressed slightly. All threads on the nut should be engaged, but it is recommended that the body not stick out of the nut too far. If desired, a bead of silicone caulking can be applied to better seal the pool wall.
5. You will need to adapt your supply piping to the 1½ " PVC slip connection with a reducing bushing (1/2" piping is recommended).
6. Glue the supply piping to the bushing.
7. Support the piping on the outside of pool to prevent potential pipe breakage.

Replacement Parts

Item No.	Part Number	Description
1	87200800	Fitting Nut ,Sealing Liner 2"
2	87200700	Friction Ring, SIF
3	87201200	Gasket TH-AGF 3.5" OD x 2-3/8" ID
4	590005	Plug, Gunite Shield, L20
5	590010	Eyeball Kit (includes: Installation Card
6	590011	Accessory Kit (includes: Capture Ring – (2 qty.), O-ring – (3 qty.), Filter Pad – (2 qty.) Silicone Lubricant – (1 qty.)
