

## Low Pressure Diaphragm Pumps

**HYPRO®**

Form L-1381  
Rev. C

### Installation, Operation, Repair and Parts Manual

#### Description

**⚠ California Proposition 65 Warning** -- This product and related accessories contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

Hypro low pressure diaphragm pumps are recommended for ground and low-level spraying of herbicides, pesticides, liquid fertilizers and many other hard-to-handle fluids. Low-cost maintenance and almost wear-free operation make these pumps ideal for a wide variety

of spraying jobs. Pressure and output are designed for optimum performance of medium to large-sized sprayers. Hypro low pressure diaphragm pumps can be adapted for splined shaft, hollow shaft, and solid shaft drive options. Pumps include a pulsation dampener.

**Model 9910-D70**  
**Model 9910-D70GR**  
Max flow: 19 gpm  
Max pressure: 290 psi  
2 diaphragms

**Model 9910-D115**  
**Model 9910-D115GR34**  
Max flow: 30.1 gpm  
Max pressure: 290 psi  
3 diaphragms

**Model 9910-D160**  
Max flow: 42.5 gpm  
Max pressure: 290 psi  
4 diaphragms

**Model 9910-D250**  
Max flow: 66 gpm  
Max pressure: 290 psi  
6 diaphragms

**Model 9910-D135**  
Max flow: 34.8 gpm  
Max pressure: 290 psi  
3 diaphragms

## Drive Options

Order appropriate Shaft Adapter Kit for drive option requirements. Refer to adjoining chart for proper selection. For proper installation, refer to Page 5.

NOTE: Model 9910-D135 is supplied with a 1-3/8" male PTO splined shaft as standard. Models 9910-D160 and

9910-D250 are supplied with a splined thru shaft. These models can be adapted for belt and pulley drive with the use of a split taper bushing (Hypro part number 3115-0011). Use of this bushing allows a Browning Q2 sheave to be mounted on the bushing.

Pump Model	1-3/8" Male Splined PTO Shaft	1" Solid Shaft w/Keyway	1-3/8" Female Splined PTO Coupler	Hydraulic Motor Mounting Flange Kits
9910-D70	9910-KIT1710	9910-KIT1711	9910-KIT1708	9910-HYD2495
9910-D115	9910-KIT1710	9910-KIT1711	9910-KIT1708	9910-HYD2495
9910-D135	Std. 1-3/8" male-splined shaft	N/A	N/A	N/A
9910-D160	Std. thru shaft	N/A	N/A	9910-HYD1570
9910-D250	Std. thru shaft	N/A	N/A	9910-HYD1570

## Control Units

Control units are available for easy flow and pressure control of your spraying system. These units include a pressure relief valve to control pressure, an oil-filled pressure gauge to monitor pressure, and multiple outlet shut-off valves to control boom flow. Refer to the adjoining chart to select the proper control unit for your pump.

Control Unit Model	Max GPM	Max PSI	Type
3300-0087	42.5	290	D70, D115, D135, D160, D250
3300-0088	42.5	290	D70, D115, D135, D160, D250

## General Safety Information

- Use of a pressure relief device on the discharge side of pump is required to prevent damage from pressure build up if the discharge is closed or blocked while the power source is still running.
- WARNING: DO NOT pump flammable or explosive fluids such as gasoline, fuel oil, kerosene, etc. DO NOT use in explosive atmospheres. The pump should be used only with liquids that are compatible with the pump component materials. DO NOT pump asphalt, asphalt sealer, roofing compounds, concrete sealers or any two-step curing products. Personal injury may result, and the warranty will be void. If there are any questions, call the Hypro Applications toll-free number: 800-445-8360.**
- Do not operate pump above recommended rpm.
- Do not pump at pressures higher than the maximum recommended pressures for the pump (see Specifications).
- Operate pump between temperature range of 45° to 140° F.
- Make certain that the power source conforms to the requirements of your equipment.
- Provide adequate protection in guarding around the moving parts, such as the shaft and pulleys.
- Disconnect power before servicing.
- Release all pressure within the system before servicing any component.
- Drain all liquids from the system before servicing.
- Secure the discharge lines before starting the pump. An unsecured discharge line may whip, causing personal injury and/or property damage.
- Check hoses for weak or worn condition before each use. Make certain that all connections are tight and secure.
- Periodically inspect the pump and the system components. Perform routine maintenance as required (see Maintenance section).
- When wiring an electrically-driven pump, follow all electrical and safety codes, as well as the most recent National Electrical Code (NEC) and the Occupational Safety and Health Act (OSHA).
- WARNING: Because of the risk of electrical shock, all wiring should be done by a qualified electrician. WARNING: DO NOT handle a pump or pump motor with wet hands, when standing on a wet or damp surface, or while standing in water.**
- Do not operate a gasoline engine in an enclosed area. Be sure the area is well ventilated.
- Use only pipe, hose and fittings rated for maximum rated pressure of pump or pressure at which pressure relief valve is set at. Check with local supplier for proper pressure rating. Do not use used pipe!
- Do not use these pumps for pumping water or other liquids for human or animal consumption.

## Installation

1. Always mount the pump with oil sight tube in the upright position.
2. Proper selection of type and size of hose is vital to good performance:
  - a. Use suction line of spiral wire braid reinforced suction hose to prevent collapse. Diameter of inlet hose should be at least that of the pump inlet hose barb or greater.
  - b. Use only approved high pressure hose on discharge side of pump.
3. All ports are provided with hose barb connections. Use good quality hose clamps, and tighten securely.

**NOTE: Use only pipe, fittings, accessories, hose, etc. rated for the maximum pressure rating of the pump.**

## Troubleshooting

Symptom	Probable Cause(s)	Corrective Action
The pump does not draw water.	One or more valves are seating improperly. Suction line is plugged or collapsed. Clogged strainer.	Remove valve and check for debris. Examine suction line. Clean strainer.
The liquid flow is irregular.	The charge in the pulsation damper is incorrect.  One or more valves are seating improperly.	Check pressure in pulsation dampener (20% working pressure).  Remove valve and check for debris. Examine the valve seatings and clean them.
Output drops and the pump is noisy.	Oil level is too low.	Add oil to correct level (halfway up the sight tube).
Oil comes out of the discharge port or oil is a milky color.	One or more diaphragms split.	Remove manifold and heads. Drain oil and clean crankcase of water. Replace diaphragms, heads and manifold. Refill with <b>Hypro Oil (Part No. 2160-0038)</b> .

## Hazardous Substance Alert

1. Always drain and flush pump before servicing or disassembling for any reason (see instructions).
2. Always drain and flush pumps prior to returning unit for repair.
3. Never store pumps containing hazardous chemicals.
4. Before returning pump for service/repair, drain out all liquids and flush unit with neutralizing liquid. Then, drain the pump. Attach tag or include written notice certifying that this has been done. Please note that it is illegal to ship or transport any hazardous chemicals without United States Environmental Protection Agency Licensing.

# Maintenance Instructions for All Models

## Maintenance

1. After use, flush the pump with clean water.
2. Hypro diaphragm pumps come with oil in the crankcase. **Hypro recommends changing oil after 40 hours of break-in operation and every three months or 500 hours, whichever comes first. Use Hypro Oil (Part Number 2160-0038).** Hypro Oil is a specially formulated, high-grade, nondetergent, SAE 30 weight oil designed to prolong pump life.

To drain oil from the pump, remove the oil drain plug, and rotate the shaft until the oil stops flowing out. To fill the pump with oil, slowly pour the oil into sight tube while turning the pump shaft. Turning the pump shaft purges all the air out of the crankcase. Always change oil when replacing diaphragms.

3. For winter storage or if a freezing condition will be encountered, flush pump with a 50/50 mixture of water and antifreeze.

Figure 1. Diaphragm Replacement

## Diaphragm and Valve Replacement

### I. Valve and O-Ring Replacement

1. Occasionally debris can cause the valves to not seat properly or damage the o-rings. To check for this problem, follow these steps.
2. Remove the pump manifold. (See parts list for your model.) Use a 17 mm box wrench (or adjustable wrench) to remove manifold nuts. (Use a 13 mm for Models D160, D250.) With manifold removed, valves can readily be removed and checked for debris or wear. To replace valves or o-rings, refer to parts list for appropriate kits.

### II. Diaphragm Replacement

**Hypro recommends changing diaphragms every 500 hours or three months, whichever comes first.**

1. Drain the oil from the pump by removing drain plug. Rotate the shaft to remove excess oil.
2. Remove the pump manifold according to Step 2 in Section I: Valve and O-ring Replacement.
3. Use a 19 mm box wrench (or adjustable wrench) to remove the diaphragm retaining bolt, support washer and diaphragm. To replace the diaphragms, order the appropriate repair kit. See the parts list.
4. Turn the crankshaft to bring the piston to its upstroke to replace the diaphragm. Use the downstroke to seat the new diaphragm into the sleeve groove. Install retaining washer and tighten nut.
5. Replace the pulsation dampener diaphragm by first bleeding the air from the dampener. (See parts list for your model.) Use a 13 mm box wrench to remove the bolts holding the dampener assembly together, then replace diaphragm. Recharge dampener to 20% of operation pressure.
6. Refill crankcase with Hypro Oil (Part No. 2160-0038). Rotate the shaft slowly forward and reverse to distribute oil, and fill to the proper level.

## Parts List for 9910-KIT1708, 9910-KIT1710 and 9910-KIT1711

## Shaft Adapter Kit Installation

Order appropriate shaft kit according to chart on page 2.

**Female Splined Coupler Kit 9910-KIT1708 (see Fig. 2).**  
 To install the 1-3/8" female splined shaft coupler:

1. Place the torque bracket (Ref. 1) onto pump and secure with bolts (Ref. 11).
2. Slide female coupler (Ref. 8) onto pump shaft. Align holes in coupler with holes in pump shaft and press in pins (Ref. 2).
3. Make sure clamp (Ref. 5) is over groove in the coupler. Slide the pump onto the PTO shaft of power source and tighten clamp.
4. Attach chains (Ref. 10) to tractor to prevent rotation of the pump.

**Solid Shaft Kit 9910-KIT1711, Male Splined Shaft Kit 9910-KIT1710 (see Fig. 3).**

To install the 1-3/8" male splined shaft coupler:

1. Slide shaft adapter flange (Ref. 5) over pump shaft. Align adapter hole with hole on the pump shaft and press in pin (Ref. 1).
2. Bolt shaft adapter (Ref. 4 or 6) onto flange with three bolts (Ref. 2) and washers (Ref. 3).
3. Place base (Ref. 7) on pump, and secure with bolts and washers. Secure opposite side of base with bolt (Ref. 9) and nut (Ref. 8).

## Control Units 3300-0082, 3300-0087 and 3300-0088

### Description

The 3300-0087 and 3300-0088 control units are designed for the control of pressure and output from 0 to 290 PSI. They are supplied with mounting brackets for mounting separately from the pump. They consist of a main pressure regulating valve and 3 on-off outlet valves. For individual boom section control, model 3300-0088 includes a main on-off lever that can be put in the off position for complete bypass to the tank.

**Safety Note:** Main relief valve bypass must be connected to the tank directly without restrictions (such as ball valves).

## Installation and Operation

flush with clean water.

### Model 3300-0087 and 3300-0088 Installation

Locate mounting bracket and secure in desired position. The pressure line from the pump is connected to main inlet hose barb (1). The return line is connected unrestricted to the main bypass hose barb (2). Boom sections are connected to the outlet boom hose barb (3).

### Operation

1. Before starting pump, adjust relief valve for the lowest possible pressure by screwing the pressure adjustment knob (4) all the way counterclockwise.
2. On Model 3300-0088, turn the main on-off lever (6) to the full bypass (up) position.
3. Open all boom feed lines by lifting lever(s) to the up position.
4. Start pump and allow liquid to flow through the control unit.
5. Turn main on-off valve lever (6) to on position (down) and adjust to the desired spraying pressure by turning the pressure adjustment knob (4). Turning the knob clockwise will increase the pressure.
6. The 3300-0087 or 3300-0088 control unit is now ready for use. After each use, flush the unit with water. For extended or winter storage, drain the unit completely.

### NOTE:

“HP” is electrical horsepower.

Consult your gas engine supplier for engine horsepower required.

## Maintenance Schedule

REGULAR SERVICE PERIOD		First Use	Each Use	First month or 40 hours	Every 3 months or 500 hours	Every 6 months or 1000 hours
Performed at every indicated month or operating hour interval, whichever comes first.						
Item						
Crankcase Oil	Check Level	X	X			
	Replace			X	X	
Gearbox Oil	Check Level	X	X			
	Replace			X	X	
Pulsation Dampener Pressure (in models with dampeners)	Set to 20% of working PSI	X				
	Check			X	X	
Diaphragms	Replace				X	
	Check				X	
Valves	Replace					X
	Check				X	
O-rings	Replace					X
	Check				X	

### CRANKCASE OIL CAPACITIES

Model	Capacity	Model	Capacity
9910-D70	24 oz.	9910-D160	56 oz.
9910-D115	32 oz.	9910-D250	98 oz.
9910-D135	32 oz.		

### ⚠ CAUTION

Oil crankcase capacities are approximate. Fill oil to proper level in sight glass. Always make sure all the air is purged out of crankcase prior to operating.

## Limited Warranty on Hypro/Shurflo Agricultural Pumps & Accessories

Hypro/Shurflo (hereafter, "Hypro") agricultural products are warranted to be free of defects in material and workmanship under normal use for the time periods listed below, with proof of purchase.

- Pumps: one (1) year from the date of manufacture, or one (1) year of use. This limited warranty will not exceed two (2) years, in any event.
- Accessories: ninety (90) days of use.

This limited warranty will not apply to products that were improperly installed, misapplied, damaged, altered, or incompatible with fluids or components not manufactured by Hypro. All warranty considerations are governed by Hypro's written return policy.

Hypro's obligation under this limited warranty policy is limited to the repair or replacement of the product. All returns will be tested per Hypro's factory criteria. Products found not defective (under the terms of this limited warranty) are subject to charges paid by the returnee for the testing and packaging of "tested good" non-warranty returns.

No credit or labor allowances will be given for products returned as defective. Warranty replacement will be shipped on a freight allowed basis. Hypro reserves the right to choose the method of transportation.

This limited warranty is in lieu of all other warranties, expressed or implied, and no other person is authorized to give any other warranty or assume obligation or liability on Hypro's behalf. Hypro shall not be liable for any labor, damage or other expense, nor shall Hypro be liable for any indirect, incidental or consequential damages of any kind incurred by the reason of the use or sale of any defective product. This limited warranty covers agricultural products distributed within the United States of America. Other world market areas should consult with the actual distributor for any deviation from this document.

### Return Procedures

All products must be flushed of any chemical (ref. OSHA section 1910.1200 (d) (e) (f) (g) (h)) and hazardous chemicals must be labeled/tagged before being shipped\* to Hypro for service or warranty consideration. Hypro reserves the right to request a Material Safety Data Sheet from the returnee for any pump/product it deems necessary. Hypro reserves the right to "disposition as scrap" products returned which contain unknown fluids. Hypro reserves the right to charge the returnee for any and all costs incurred for chemical testing, and proper disposal of components containing unknown fluids. Hypro requests this in order to protect the environment and personnel from the hazards of handling unknown fluids.

Be prepared to give Hypro full details of the problem, including the model number, date of purchase, and from whom you purchased your product. Hypro may request additional information, and may require a sketch to illustrate the problem.

**Contact Hypro Service Department at 800-468-3428 to receive a Return Merchandise Authorization number (RMA#).** Returns are to be shipped with the RMA number clearly marked on the outside of the package. Hypro shall not be liable for freight damage incurred during shipping. Please package all returns carefully. All products returned for warranty work should be sent **shipping charges prepaid** to:

HYPRO / PENTAIR  
Attention: Service Department  
375 Fifth Avenue NW  
New Brighton, MN 55112

For technical or application assistance, call the **Hypro Technical/Application number: 800-445-8360**, or send an email to: **technical@hypropumps.com**. To obtain service or warranty assistance, call the **Hypro Service and Warranty number: 800-468-3428**; or send a fax to the **Hypro Service and Warranty FAX: 651-766-6618**.

\*Carriers, including U.S.P.S., airlines, UPS, ground freight, etc., require specific identification of any hazardous material being shipped. Failure to do so may result in a substantial fine and/or prison term. Check with your shipping company for specific instructions.
