

HYPRO® ULTRA LO-DRIFT™

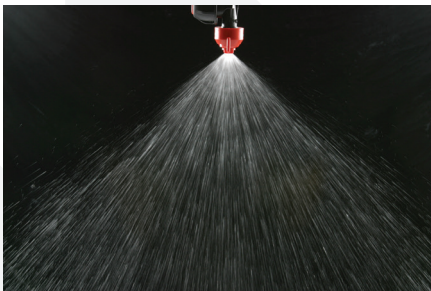

Drift-Reducing, Dual-Air Eduction Spray Nozzles

Features & Benefits

- Ideal for pre- and post-emerge application of systemic herbicides
- Precise droplet control to minimize fine driftable droplets, without sacrificing coverage
- Wide spray angle (120°) enables boom to be lowered to further decrease drift and deliver superior spray uniformity
- Precision molded from durable polyacetal, providing superior resistance to wear
- Small, compact size reduces the chances of accidental breakage
- Available in sizes 015 - 08 (including 025), suitable for most spraying applications
- Convenient FastCap® version available for safer handling
- Nozzles fit in standard fan nozzle caps (Hypro CAP00 series) and Hypro TwinCap™ nozzle holder (part# 152607TC)

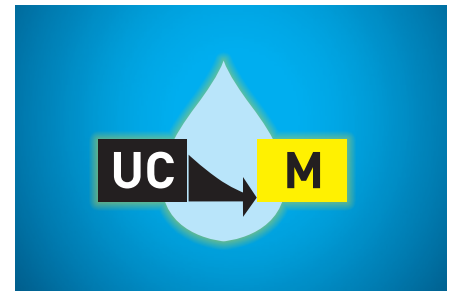

Ideal for:

Wide, three dimensional pattern creates multiple angles for the spray to cover the target.

Ideal for pre-and post-emerge application of systemic herbicides.

Designed to eliminate driftable droplets, without sacrificing coverage.
