

PLUS PREMIUM STEEL PRESSURIZED TANKS

- ◆ Stainless Steel Service Connection – “The Professional’s Choice”
- ◆ Metal Air Valve Assembly – “Field-Serviceable”
- ◆ 125 PSI Maximum Operating Pressure – PSP50, PSP85, and PSP119

APPLICATIONS

Residential Water Systems, Industrial, Commercial, and Agricultural.

SPECIFICATIONS

Shell: Heavy-gauge steel

Base: High-impact composite, ABS

Finish: Electrostatically applied, baked-on polyester paint

Water Cell: One-piece seamless PVC, made from FDA listed material

Flange: 304SS

Service Connection: NPT threads, integral to flange

Air Valve: Nickel-plated brass, threaded for ease of service

FEATURES

Service Connection: 304 stainless steel

Air Valve: Nickel-plated brass

Maximum Operating Pressure:
100 PSI on 16” and 20” tanks;
125 PSI on 24” tanks. (models: PSP50, PSP85, PSP119)

Heavy-Gauge Metal Construction: Sturdy “welded wrapper and head design.” Built to last.

Polyester Paint Finish: Electro statically powder-painted, then oven-baked for a smooth high-gloss, appliance-quality finish. Resists corrosion

Elongated, Seamless Water Cell:

- ◆ Controlled 2-dimensional cell expansion
- ◆ Rugged, seamless “water cell” prevents the most common cause of tank failure – “waterlogging”
- ◆ Water never touches the steel tank material

Stainless Service Connection:

- ◆ Corrosion-resistant
- ◆ Stainless steel – the professional’s choice

Integral Standpipe: Promotes complete flushing of the water entering/exiting the tank

Nitrogen-Rich Precharge: Decreases air permeation three to four times over straight air precharge

40 PSI Precharge: Ready for use with 40/60 pressure range systems. Enables installer to reduce pressure depending on pressure switch setting

Sturdy Base: Tested-tough composite construction

Tank Sizing Rule: Size tank for one gallon of drawdown for each gallon per minute at pump capacity

Example: For a 1 HP, 20 GPM unit pumping 20 gallons per minute on a 30-50 pressure switch setting, the properly sized PLUS tank is a PSP85-T52 which has a 26 gallon drawdown.

Note: Drawdown will be affected by operating temperature of the system, accuracy of the pressure switch and gauge, the actual precharge pressure, and rate of fill. Pumps installed with a Pro-Source PLUS tank require a relief valve equal to the tank's maximum operating pressure. Relief valve must be capable of relieving entire flow of pump at relief pressure.

100					0.44	0.35	0.26	0.17

*Utilize this chart if proper selection cannot be made using Chart A. Drawdown based on Boyle's Law.

- PROCEDURE:**
1. Identify drawdown multiplier relating to specific application.
 2. Insert multiplier (X) into the following formula:

$$\frac{\text{Pump GPM} \times \text{Min Runtime}}{\text{Multiplier (X)}} = \text{Minimum Tank Capacity Required}$$

EXAMPLE: An example of a 20 GPM pump with a minimum runtime of 1 minute, installed on a 50-70 PSIG system pressure range:

$$\frac{20 \text{ GPM} \times 1 \text{ minute}}{.24 \text{ (factor) from Chart B}} = 83.3 \text{ minimum U.S. gal. tank capacity required}$$

Referring to "Ordering Information" chart, the model PSP85-T52 has the closest U.S. gallon capacity that is greater or equal to the minimum volume requirement of 83.3 U.S. gallons.

OPERATING CYCLE

1. Separator is completely empty:
A new cycle is ready to begin. Simple, positive action produces maximum drawdown on every cycle.

2. Water begins to enter the tank:
Air is compressed around the water separator as it fills with water.

3. Pump-up cycle completed:
Air is now compressed to the cut-off setting of pressure switch.

4. Water is being drawn from the tank:
Compressed air in the tank forces water out of the separator.
