

POOL COVER PUMP

MODEL 2125PCP

- Multi-functional performance – ideal for pool covers, spas, basements or removing any unwanted standing water
- Stabilizer Base – removable base filters debris for smooth operation
- Instant reset protection – prevents ice lock or blocked impeller for longer life
- Easy to use – 25' power cord with GFCI plug and 90° garden hose adapter included
- 1" discharge

The pump starts periodically, up to once every 10 minutes, and runs for a few seconds. If the pump does not sense more than 3/4 inches of water, it will stop and resume periodically, repeating the cycle until water is detected. If more than 3/4 inch of water is detected, the pump will continue to run until the water is removed to 1/2 inch. Once water is removed, the pump will run on a 7-minute detection cycle starting 4 times the first minute, 2 times the second minute and 1 time for the 5 remaining minutes. If still no water is detected, it resumes its normal cycle. If the rotor is locked, the pump turns off. To restart the pump, unplug the cord and plug it in again.
